For use with pages 482–485

7.1 Skill Practice

- 2.4, 1.5, 50%
- An asymptote is a line that a graph approaches very closely but never meets.

3. C 4. A 5. B

domain: all real numbers,
range: $y < 0$

domain: all real numbers,
range: $y > 2$

domain: all real numbers,
range: $y > 3$

domain: all real numbers,
range: $y > -1$

domain: all real numbers,
range: $y > -1$

Answers for 7.1 *continued*
For use with pages 482–485

domain: all real numbers,
range: $y < -2$

domain: all real numbers,
range: $y > 3$

domain: all real numbers,
range: $y > -4$

domain: all real numbers,
range: $y < 1$

24. B **25.** D

26. The y -intercept should be $(0, 2)$, not $(0, 1)$.

27. The power of $(x - 3)$ translates the parent graph 3 units to the right, not to the left.

- 28.** $y = 1219(1.12)^t$, where y represents the number of monk parakeets and t represents the number of years since 1992.
- 29.** $A = 800\left(1 + \frac{0.02}{365}\right)^{365t}$, where A represents the amount in the account after t years.
- 30.** $y = 450(1.06)^t$, where y represents the value of the table after t years.
- 31. a.** \$1844.81
- b.** 18 yr
- 32. Sample answer:**
 $y = 9 \cdot 3^{x-1} + 2$
- 33. a.** The graph no longer has a vertical stretch of 2.
- b.** The graph will increase slower.
- c.** The graph will be translated 3 units to the right instead of 4 units to the left.
- d.** The graph will be translated 1 unit down instead of 3 units up.

34. a. $\frac{ab^{x+1}}{ab^x} = \frac{b^x b^1}{b^x} = b$

- b. Sample answer:** Since the points $(0, 4)$ and $(1, 4)$ are of the form $f(x)$ and $f(x + 1)$, when $f(x)$ and $f(x + 1)$ are substituted into the equation from part (a), $b = 1$ and therefore the function is no longer exponential.

7.1 Problem Solving

- 35. a.** 0.42 million, 2.47, 147%

about 16 million DVD players

For use with pages 482–485

36. a. 2500, 1.50, 50%

b.

domain: $t \geq 0$, range: $y \geq 2500$;
about 13,000 referrals

37. a. \$2479.38

b. \$2406.98

c. \$2383.23

38. a. \$2804.71

b. \$2701.39

c. \$2666.99

39. a. $P = 494.29(1.03)^t$;
664,284 people

b.

domain: $t \geq 0$,
range: $P \geq 494.29$

c. 1996

40. a. $p = 50(1.105)^n$

b. \$82.37; \$1,084,420.72; no.
Sample answer: This amount is unreasonable because the model is only defined for 6 bids and 100 is out of this domain.

Answers for 7.1 *continued*

For use with pages 482–485

41. a. $p = 48.28(1.06)^t$

b.

2003

c. *Sample answer:* Since the function is only defined when t is between 0 and 4, you can look at the graph between these values to determine the minimum or maximum that gives meaningful results.

42. a. $n = 41(1.089)^t$

b.

t	n
0	41
8	81.097
24	317.29

d. about 317 breeding pairs

43. No. *Sample answer:* The initial amount is all that is equivalent. The first \$6000 amount grows at a faster rate.

44. a. 11.6%

b. \$15,582.79

7.1 Mixed Review

45. 0.216

46. 0.16

47. 0.03125

48. 0.015625

49. $\frac{1}{16}$

50. $\frac{27}{512}$

51. $\frac{16,807}{100,000}$

52. $\frac{64}{125}$

53. $(x + 10)(x - 3)$

54. $(x + 9)(x + 6)$

55. $(2x + 5)(x - 6)$

56. not factorable

57. $(x^2 - 3)(x - 2)$

Answers for 7.1 *continued*

For use with pages 482–485

58. $(x - 4)(x^2 + 4x + 16)$

59. 5

60. 7

61. $\sqrt[7]{-72}$

62. $-12 \pm \sqrt[4]{52}$

63. $\pm \sqrt[6]{200}$

64. $9 \pm \sqrt[8]{17}$
